## **INTRODUCTION**

**The Proposed Project is named as “WEB BASED MATRIMONIAL SITE” where boys and girls registered themselves for to search their companions.**

**Due to computerized and it is available online, people can register as and when they require and they can register wherever they are, so it provides lot of flexibility for people to search their companions easily.**

**Today, the marriage alliance arranged by known people and that are conducted manually and the amount of time required is very huge. Only they can help to know only few alliances.**

## PROJECT PROFILE

<b>Project Title</b>	<b>: LIFEPARTENER.COM</b>
<b>Institution</b>	<b>: M. &amp; N. Virani Science College.</b>
<b>Functionality</b>	<b>: LIFEPARTENER.COM is a matrimonial site where you can find your life partner. This site contains many profiles and it also provides you to search your appropriate life partner by simply being the member of it. For more information please visit the site “www.Lifepartner.com”</b>
<b>Front End</b>	<b>: Asp.Net</b>
<b>Back End</b>	<b>: MS Access</b>
<b>Operating System</b>	<b>: Windows 7</b>
<b>Web Server</b>	<b>: IIS</b>
<b>Web Browser</b>	<b>: Internet Explorer</b>
<b>Editor</b>	<b>: Microsoft Visual Studio 2008</b>
<b>Requirements</b>	<b>: p4 Processor, 512 MB RAM, 80 GB Hard disk</b>
<b>Project Guide</b>	<b>: Mr. Pradip Vanpariya &amp; Mr. Keyur Zala</b>
<b>Developed By</b>	<b>: Stuti Pandya &amp; Jigna Mandaliya</b>
<b>Submitted To</b>	<b>: M. &amp; N. Virani Science College</b>
<b>University</b>	<b>: Saurashtra University</b>

## **PREFACE**

**The main objective of any computer science student is to get as much of practical knowledge as possible. Being able to have a practical knowledge by developing a project is a lifetime experience. This project is the stepping stone for our career.**

**The LIFE PARTNER.COM is full featured matrimonial portal launched by BAN Technologies. We are firmly determined to make our customer satisfied with this giant step. We have provided great features that users can use to find their life partner. We have created nice interface and also introduced few new features first time. Our goal is to provide a matrimony portal that can fulfill all the needs of user in efficient way. Our technical team has come so far by putting great efforts while developing this site. We are still working on enhancements and new features.**

**This site contains many applications of its members and there are many successful stories are given which provides you the information about the site as well as its achievements. We also provide members to search various partner according to their choice with some additional functionality like ideal partner and favourites.**

**Start enjoying the great features by registering today and tell your friend also about this amazing site. Best wishes from lifepartner.com and BAN Technologies in your search for dream match.**

## **ACKNOWLEDGEMENT**

**Before we describe brief about our project. We would like to add a few heartfelt words for the people who were very much helpful to us in developing this project.**

**It gives us great pleasure in submitting this project entitled “LIFEPARTNER.COM” developed at Shree M. & N. Virani Science College, Rajkot as a part of the curriculum of Asp.NET.**

**We heartily thank Mr. Pradip Vanpariya & Mr. Keyur Zala, who were always there to guide us through the development of the project. They are some of the major sources behind the success of the project. We immensely appreciate the tips they have constantly given us during the project. It was an enormous pleasure to work with them.**

**We would like to thank all the faculties of M. & N. Virani Science College for their support and encouragement. They spared time for us whenever we needed. They strengthened our fundamentals and basic concepts with their experience through knowledge.**

**And finally heart full of appreciation to all our classmates and friends for their helpful suggestions.**

## **About LIFE PARTNER.COM**

**Marriage information has always been an integral part of the knowledge base in any civilized society. Usually some agencies and other de-institutionalized sources become operative in producing and transferring great variety of matrimonial information. In recent time, online matrimony portals accelerate the opportunities of providing newer matrimony services for sharing matrimonial information more comfortably and selectively, though often criticized in terms of adequacy and authenticity of such information.**

**This paper aims to present a brief account on marriage information systems and services with reference to India, thus provide glimpses of popular matrimony sites emerged in last two decades. It evaluates the usefulness and web-metrics as well as popularity of broad-spectrum matrimony portals; those have become accessible to diverse Indian communities, and beyond the geographical boundaries.**

**It emphasizes on proper coordination and standardization among the service portals toward developing a comprehensive information system for potential marriage-information seekers in national, regional, and local level.**

**New policy initiatives and technological capabilities might provide more effective platform is suggested to reveal a new matrimony space in India.**

## **SYSTEM ANALYSIS**

### **CONTENTS**

- 1. Existing System**
- 2. Proposed System**

#### **Existing System:**

From the through study it is found that, the existing method of conducting civil services preliminary examinations are very tedious to both the commissions those are conducting and the students those who are appearing for. Here all the aspects of exams are conducted manually. It is time consuming, Evaluation will be later and results are expected later.

#### **Proposed System:**

To overcome these problems here is a package of computerizing the whole aspect. Computerizing and making online does the same task in a better and efficient manner. These exams are also called as screening exams in which the candidates are selected to the main exams by considering the maximum marks secured by them. These marks are not counted for the main exams. In these preliminary exams the questions will be of objective types.

Hence this is a step ahead to show that online exams are easier to conduct, reduces the paper work and evaluation will be easier and faster.

## **Hardware Requirements**

**Pentium III 400MHz and Above Processor**

**2GB RAM**

**15" Color Monitor**

**Keyboard**

**Mouse**

## **Software Requirements**

**Windows 2000/XP/7 Operating System.**

**Microsoft Visual Studio 2008**

**MS Access**

**Internet Explorer**

## WHAT IS .NET ?

The .NET Framework introduces a completely new model for the programming and deployment of applications. .NET is Microsoft's vision of "software as a service", a development environment in which you can build, create, and deploy your applications and the next generation of components, the ability to use the Web rather than your own computer for various services.

### **The Microsoft .NET Framework**

- ❖ The .NET Framework is the infrastructure for the Microsoft .NET platform.
- ❖ The .NET Framework is an environment for building, deploying, and running Web applications and Web Services.
- ❖ Microsoft's first server technology ASP (Active Server Pages), was a powerful and flexible "programming language". But it was too code oriented. It was not an application framework and not an enterprise development tool.
- ❖ The Microsoft .NET Framework was developed to solve this problem.

### **.NET Frameworks keywords:**

- Easier and quicker programming
- Reduced amount of code
- Declarative programming model
- Richer server control hierarchy with events
- Larger class library
- Better support for development tools

**The .NET Framework was born:**

**Microsoft changed all complex tasks with the new .NET Framework. That was a huge advantage for all developers. Most of the Win32 API was now accessible through a very simple Object Model. Most of the features and functions of C++ were added to Visual Basic. A new Programming Language C# was introduced, which offered flexibility and productivity. ASP.NET also called ASP+ replaced ASP.**

**It provides the easiest and most scalable way to build, deploy and run web services. ASP.NET server controls enable an HTML-like style of declarative programming that let you build great pages with far less code than with classic ASP. VB, C++ and C# Code can be used in other languages f.e. code written in VB can be easily used in C# or in VC++. Also another benefit is that you can step between the languages in the debugger.**

## **The .NET Compilation Stages:**

**The Code written in .NET isn't compiled directly to the executable, instead .NET uses two steps to compile the code. First, the code is compiled to an Intermediate Language called Microsoft Intermediate Language (MSIL). Second, the compiled code will be recompiled with the Common Language Runtime ( CLR ), which converts the code to the machine code. The basic Idea of this two stages was to make the code language independence.**

**The .NET Framework consists of 3 main parts:**

**Programming languages:**

- **C# (Pronounced C sharp).**
- **Visual Basic (VB .NET).**
- **J# (Pronounced J sharp).**

**Server technologies and client technologies:**

- **ASP .NET (Active Server Pages).**
- **Windows Forms (Windows desktop solutions).**
- **Compact Framework (PDA / Mobile solutions).**

**Development environments:**

- **Visual Studio .NET**
- **Visual Web Developer**

## **OVERVIEW OF ASP.NET :**

### **What is Classic ASP ?**

- Microsoft's previous server side scripting technology ASP (Active Server Pages) is now often called classic ASP.
- ASP 3.0 was the last version of classic ASP.

### **ASP.NET is NOT ASP:**

- ASP.NET is the next generation ASP, but it's not an upgraded version of ASP.
- ASP.NET is an entirely new technology for server-side scripting. It was written from the ground up and is not backward compatible with classic ASP.
- You can read more about the differences between ASP and ASP.NET in the next chapter of this tutorial.
- ASP.NET is the major part of the Microsoft's .NET Framework.

### **What is ASP.NET?**

**ASP.NET is a server side scripting technology that enables scripts (embedded in web pages) to be executed by an Internet server.**

- ASP.NET is a Microsoft Technology
- ASP stands for Active Server Pages
- ASP.NET is a program that runs inside IIS
- IIS (Internet Information Services) is Microsoft's Internet server
- IIS comes as a free component with Windows servers
- IIS is also a part of Windows 2000 and XP Professional

### **What is an ASP.NET File?**

- An ASP.NET file is just the same as an HTML file
- An ASP.NET file can contain HTML, XML, and scripts
- Scripts in an ASP.NET file are executed on the server
- An ASP.NET file has the file extension ".aspx"

## **How Does ASP.NET Work?**

- When a browser requests an HTML file, the server returns the file
- When a browser requests an ASP.NET file, IIS passes the request to the ASP.NET engine on the server
- The ASP.NET engine reads the file, line by line, and executes the scripts in the file
- Finally, the ASP.NET file is returned to the browser as plain HTML

## **ABOUT MS ACCESS**

**Ms Access is a database software package. A database is an organized collection of records. Telephone and address books are examples of paper databases. With Access, you can create a computerized database.**

**For example, you can use Access to organize the students who attend a school, the courses they take, and the instructors who teach them. After you create an Access database, you can search it, manipulate it, and extract information from it. This lesson introduces you to Access windows and teaches you how to create a database.**

**Tables are the foundation of an Access database. Access stores data in tables. This lesson teaches you how to create a table, add fields to a table, assign data types to fields, and set field properties**

**After you create an Access table, you can modify it, enter data into it manually or import data from somewhere else, such as Excel.**

**You can sort Access data so you can view records in the order you want to view them, and you can filter data so you only see the records you want to see.**

**Access data is stored in multiple tables. Relationships join tables together so you can work with the data from multiple tables.**

**You can use a query to view a subset of your data or to answer questions about your data. For example, if you want to view a list of student names and email addresses, but you do not want to see addresses and other data, you can create a query that displays the student's first name, last name, and email address only. Alternatively, if you want to know which students live in DE, you can restrict your list to those students.**

**Access forms are much like paper forms: you can use them to enter, edit, or display data. They are based on tables. When using a form, you can choose the format, the arrangement, and which fields you want to display.**

**Reports organize and summarize data for viewing online or for printing. A detail report displays all of the selected records. You can include summary data such as totals, counts, and percentages in a detail report.**

**A summary report does not list the selected records but instead summarizes the data and presents totals, counts, percentages, or other summary data only. Access has several report generation tools that you can use to create both detail and summary reports quickly.**

## **SYSTEM ANALYSIS & DESIGN**

### **INTRODUCTION**

Systems are created to solve problems. One can think of the systems approach as an organized way of dealing with a problem. In this dynamic world, the subject System Analysis and Design mainly deals with the software development activities.

### **OBJECTIVES**

After going through this lesson, you should be able to:

- understand a system
- understand the different phases of system developments life cycle
- know the components of system analysis
- know the components of system designing

### **Defining a System**

A collection of components that work together to realize some objective forms a system. Basically there are three major components in every system, namely input, processing and output.

In a system the different components are connected with each other and they are interdependent. For example, Human body represents a complete natural system. We are also bound by many national systems such as political system, economic system, educational system and so forth. The objective of the system demands that some output is produced as a result of processing the suitable inputs.

## **SYSTEM DEVELOPMENT LIFE CYCLE**

**System life cycle is an organizational process of developing and maintaining systems. It helps in establishing a system project plan, because it gives overall list of processes and sub-processes required developing a system.**

**System development life cycle means combination of various activities. In other words we can say that various activities put together are referred as system development life cycle. In the System Analysis and Design terminology, the system development life cycle means software development life cycle.**

**Following are the different phases of software development cycle:**

- **System study**
- **Feasibility study**
- **System analysis**
- **System design**
- **Coding**
- **Testing**
- **Implementation**
- **Maintenance**

**The different phases of software development life cycle are shown in following Figure.**

**Different phases of Software development Life Cycle**

## **PHASES OF SYSTEM DEVELOPMENT LIFE CYCLE :**

Let us now describe the different phases and the related activities of system development life cycle in detail.

### **(a) System Study:**

System study is the first stage of system development life cycle. This gives a clear picture of what actually the physical system is? In practice, the system study is done in two phases. In the first phase, the preliminary survey of the system is done which helps in identifying the scope of the system. The second phase of the system study is more detailed and in-depth study in which the identification of user's requirement and the limitations and problems of the present system are studied. After completing the system study, a system proposal is prepared by the System Analyst (who studies the system) and placed before the user. The proposed system contains the findings of the present system and recommendations to overcome the limitations and problems of the present system in the light of the user's requirements.

To describe the system study phase more analytically, we would say that system study phase passes through the following steps:

- problem identification and project initiation
- background analysis
- inference or findings

**(b) Feasibility Study:**

On the basis of result of the initial study, feasibility study takes place. The feasibility study is basically the test of the proposed system in the light of its workability, meeting user's requirements, effective use of resources and .of course, the cost effectiveness. The main goal of feasibility study is not to solve the problem but to achieve the scope. In the process of feasibility study, the cost and benefits are estimated with greater accuracy.

### **(c) System Analysis:**

**Assuming that a new system is to be developed, the next phase is system analysis. Analysis involved a detailed study of the current system, leading to specifications of a new system. Analysis is a detailed study of various operations performed by a system and their relationships within and outside the system. During analysis, data are collected on the available files, decision points and transactions handled by the present system. Interviews, on-site observation and questionnaire are the tools used for system analysis. Using the following steps it becomes easy to draw the exact boundary of the new system under consideration:**

- Keeping in view the problems and new requirements
- Workout the pros and cons including new areas of the system

**All procedures, requirements must be analyzed and documented in the form of detailed data flow diagrams (DFDs), data dictionary, logical data structures and miniature specifications. System Analysis also includes sub-dividing of complex process involving the entire system, identification of data store and manual processes.**

**The main points to be discussed in system analysis are:**

- Specification of what the new system is to accomplish based on the user requirements.
- Functional hierarchy showing the functions to be performed by the new system and their relationship with each other.
- Function network which are similar to function hierarchy but they highlight those functions which are common to more than one procedure.
- List of attributes of the entities - these are the data items which need to be held about each entity (record)

**(d) System Design:**

**Based on the user requirements and the detailed analysis of a new system, the new system must be designed. This is the phase of system designing. It is a most crucial phase in the development of a system. Normally, the design proceeds in two stages:**

- **preliminary or general design**
- **Structure or detailed design**

**Preliminary or general design:** In the preliminary or general design, the features of the new system are specified. The costs of implementing these features and the benefits to be derived are estimated. If the project is still considered to be feasible, we move to the detailed design stage.

**Structure or Detailed design:** In the detailed design stage, computer oriented work begins in earnest. At this stage, the design of the system becomes more structured. Structure design is a blue print of a computer system solution to a given problem having the same components and inter-relationship among the same components as the original problem. Input, output and processing specifications are drawn up in detail. In the design stage, the programming language and the platform in which the new system will run are also decided.

There are several tools and techniques used for designing. These tools and techniques are:

- **Flowchart**
- **Data flow diagram (DFDs)**
- **Data dictionary**
- **Structured English**
- **Decision table**
- **Decision tree**

Each of the above tools for designing will be discussed in detail in the next lesson.

**(e) Coding:**

After designing the new system, the whole system is required to be converted into computer understanding language. Coding the new system into computer programming language does this. It is an important stage where the defined procedures are transformed into control specifications by the help of a computer language. This is also called the programming phase in which the programmer converts the program specifications into computer instructions, which we refer as programs. The programs coordinate the data movements and control the entire process in a system.

It is generally felt that the programs must be modular in nature. This helps in fast development, maintenance and future change, if required.

**(f) Testing:**

Before actually implementing the new system into operations, a test run of the system is done removing all the bugs, if any. It is an important phase of a successful system. After codifying the whole programs of the system, a test plan should be developed and run on a given set of test data. The output of the test run should match the expected results.

Using the test data following test run are carried out:

- Unit test
- System test

**Unit test:** When the programs have been coded and compiled and brought to working conditions, they must be individually tested with the prepared test data. Any undesirable happening must be noted and debugged (error corrections).

**System Test:** After carrying out the unit test for each of the programs of the system and when errors are removed, then system test is done. At this stage the test is done on actual data. The complete system is executed on the actual data. At each stage of the execution, the results or output of the system is analyzed. During the result analysis, it may be found that the outputs are not matching the expected out of the system. In such case, the errors in the particular programs are identified and are fixed and further tested for the expected output.

When it is ensured that the system is running error-free, the users are called with their own actual data so that the system could be shown running as per their requirements.

**(g) Implementation:**

**After having the user acceptance of the new system developed, the implementation phase begins. Implementation is the stage of a project during which theory is turned into practice. During this phase, all the programs of the system are loaded onto the user's computer. After loading the system, training of the users starts. Main topics of such type of training are:**

- **How to execute the package**
- **How to enter the data**
- **How to process the data (processing details)**
- **How to take out the reports**

**After the users are trained about the computerized system, manual working has to shift from manual to computerized working. The following two strategies are followed for running the system:**

- i. **Parallel run:** In such run for a certain defined period, both the systems i.e. computerized and manual are executed in parallel. This strategy is helpful because of the following:
  - Manual results can be compared with the results of the computerized system.
  - Failure of the computerized system at the early stage, does not affect the working of the organization, because the manual system continues to work, as it used to do.
  -
- i. **Pilot run:** In this type of run, the new system is installed in parts. Some part of the new system is installed first and executed successfully for considerable time period. When the results are found satisfactory then only other parts are implemented. This strategy builds the confidence and the errors are traced easily.

**(h) Maintenance:**

Maintenance is necessary to eliminate errors in the system during its working life and to tune the system to any variations in its working environment. It has been seen that there are always some errors found in the system that must be noted and corrected. It also means the review of the system from time to time.

The review of the system is done for:

- knowing the full capabilities of the system
- knowing the required changes or the additional requirements
- studying the performance

If a major change to a system is needed, a new project may have to be set up to carry out the change. The new project will then proceed through all the above life cycle phases.

## PHOTO PAGE

The screenshot shows a Microsoft Internet Explorer window displaying the 'My Photo Album' section of the Life Partner.com website. The URL in the address bar is <http://localhost:1127/lifepartner1/myphoto.aspx>. The page features a green sidebar on the left with links for 'My Profile', 'My Photo', 'My Favourites', 'Ideal Partner', 'Change Password', and search options like 'Search By City', 'Search by Caste', 'Search by Profession', 'Search by Keyword', and 'Photo Search'. The main content area displays a 'Dear Member: Stuti' message and a heading 'My Photo Album'. It includes instructions to 'Upload or Delete photos to your Album.' Below this, there is a 'Cover Photo' section showing a woman in a yellow sari, with options to 'Browse...', 'Upload', and 'Submit'. There are four thumbnail images labeled 'Photo1', 'Photo2', 'Photo3', and 'Photo4', each with a 'Delete' link. At the bottom of the page are links for 'About Us', 'Contact Us', 'FAQ', 'Terms & Conditions', and 'Advertise with us'. The taskbar at the bottom of the browser window shows various open tabs and icons.

## CHANGE PASSWORD PAGE

The screenshot shows a Microsoft Internet Explorer window displaying the 'Change Password' page of Life Partner.com. The title bar reads 'Life Partner.com | A Free Matrimony Site - Microsoft Internet Explorer'. The address bar shows the URL 'http://localhost:1127/lifepartner1/changepwd.aspx'. The page features a red header with the 'LifePartner.com' logo and the tagline 'Find your soulmate here'. To the right of the header is a photograph of a woman in traditional Indian wedding attire. Below the header is a navigation menu with links for 'Home', 'Search', 'Success Stories', 'Register', and 'Sign Out'. On the left, there is a sidebar titled 'My Links' containing links such as '» My Profile', '» Ideal Partner', '» My Photo', '» My Favourites', '» Change Password', 'Search' (with sub-links '» Search By City', '» Search by Caste', '» Search by Profession', '» Search by Keyword', and '» Photo Search'), 'About Us', 'Contact Us', 'FAQ', 'Terms & Conditions', and 'Advertise with us'. The main content area is titled 'Change Your Password' and contains three input fields: 'Old Password' (containing '\*\*\*\*\*'), 'New Password' (containing '\*\*\*\*\*'), and 'Confirm Password' (containing '\*\*\*\*\*'). A 'Change Password' button is located below these fields. At the bottom of the page, there is a footer with links for 'About Us', 'Contact Us', 'FAQ', 'Terms & Conditions', and 'Advertise with us'. The status bar at the bottom of the browser window shows 'Local intranet' and the system time '10:41 AM'.

## SEARCH PARTNER PAGE

The screenshot shows a Microsoft Internet Explorer window displaying the Life Partner.com website. The title bar reads "Life Partner.com | A Free Matrimony Site - Microsoft Internet Explorer". The menu bar includes File, Edit, View, Favorites, Tools, and Help. The toolbar contains Back, Forward, Stop, Home, Search, Favorites, and other standard browser icons. The address bar shows the URL "http://localhost:1127/lifepartner1/searchpartner.aspx". Below the address bar is a toolbar with AVG, YAHOO!, Search, Active Surf-Shield, Search-Shield, AVG Info, and Get More.

The main content area features a banner with the text "LifePartner.com" and "Find your soulmate here" next to a photo of a woman in traditional Indian wedding attire. The navigation menu on the left is titled "My Links" and includes links such as My Profile, My Photo, My Favourites, Ideal Partner, Change Password, and several search options: Search, Search By City, Search by Caste, Search by Profession, Search by Keyword, and Photo Search. The central part of the page is titled "Partner search." and contains four search categories: "My Favourites" (Save up to 3 searches with different criteria! Get search results with one click!), "Profession Search" (Looking for matches from a particular profession? Find the your match now), "Photo Search" (View members with photo profiles. Upload your photo & join the Club! Get high response!), and "City Search" (Is your life partner in your own city? Or in nearby cities? Search and find out!). The bottom of the window shows the taskbar with various open windows and the system tray indicating the date and time as 10:44 AM.

**Taruna And Anand**

**Wedding Date:** 18th February 2009

Well...thats quite interesting that i was checking some profiles casually and i clicked her profile one day inspite of the fact that she didnt put her pic in the profile..still i move ahead..then we chat for sometime and got to know that we are the ideal partner for each other and we would like to thank Shaadi.com for it to act as a medium to reach our destiny..we are very happy to find each other and now we both proudly and loudly say that we are in "LOVE" which is really a beautiful feeling to experience...we got ingaged on 10th dec-08 and will be marrying soon later this year...keep up the good work shaadi..and to all the members..never give up

## TERMS & CONDITIONS PAGE

The screenshot shows a Microsoft Internet Explorer window displaying the 'TERMS & CONDITIONS PAGE' for Life Partner.com. The title bar reads 'Life Partner.com | A Free Matrimony Site - Microsoft Internet Explorer'. The menu bar includes File, Edit, View, Favorites, Tools, and Help. The toolbar contains Back, Forward, Stop, Home, Search, Favorites, and other icons. The address bar shows 'http://localhost:1127/lifepartner1/terms.aspx'. Below the address bar is a toolbar with AVG, Yahoo! SEARCH, and other links. The main content area features a red banner with the 'LifePartner.com' logo and the tagline 'Find your soulmate here'. To the right of the banner is a photograph of a woman in traditional Indian wedding attire. A sidebar on the left contains links for 'Search' (Search By City, Search by Caste, Search by Profession, Search by Keyword, Photo Search) and 'Login' (Already a Member?, New Member). The main content area includes a registration prompt 'Not a Member Yet? Then Get Registered with us for free.', a section titled 'Terms and Conditions' with a link to 'lifepartner.com', and a section titled 'Terms and Conditions Governing Membership'. It also includes a 'DEAR USER:' section with a note about reading terms before registration, a 'Conditions of Use' section, and a note about accepting terms upon visiting the site.

## USER INFORMATION PAGE

The screenshot shows a Microsoft Internet Explorer window displaying the 'User Information Page' for Life Partner.com. The title bar reads 'Life Partner.com | A Free Matrimony Site - Microsoft Internet Explorer'. The address bar shows the URL 'http://localhost:1127/lifepartner1/Ad\_UserInfo.aspx'. The page content includes a banner with the text 'LifePartner.com' and 'Find your soulmate here', followed by a photo of a woman in traditional Indian wedding attire. A navigation menu on the left has 'Admin' selected, with options like 'User Information', 'Success Stories', 'Change Password', and 'Sign Out'. The main content area displays a table of user information:
